BlueDot Impact

Curated Talent Marketplace

Community Lead Work Test / Eitan Sprejer

The Problem

BlueDot has trained 7,000+ people. Some are exceptional. There's no fast track to get the best of them into impactful roles, funded projects, or collaborations.

10-30%

of fellowship alumni cycle into another fellowship rather than converting to work

$150M+

given by Coefficient Giving in 2025, wanting more good applications

The Solution

Monthly, invite-only event in SF. ~50 people, ~3 hours. Ten structured 15-minute 1-on-1s per person, with pre-matching based on profiles.

Institutional Leaders (10-15)

Funders, hiring managers, program directors. People who can hire, fund, or place talent.

Top Talent (30-35)

BlueDot's highest-rated alumni. Invited based on course performance and facilitator recommendations.

Why It Works

EAG events already prove that curated 1-on-1 matching produces career outcomes.

~10
meaningful connections per attendee at EAGx events

$70
cost per connection at EAGx (ours: $12-28/attendee)

- We take that proven mechanic and make it **more exclusive** (top talent only)
- **More frequent** (monthly, not a few times per year)
- **More accountable** (dedicated facilitator follow-up with every participant)

Why BlueDot

Two assets no one else has in the same organization.

1. Curated talent database

Performance data on 7,000+ alumni: course evaluations, project quality, facilitator recommendations.

2. Demand-side relationships

Direct relationships with funders, safety orgs, and programs. Can get the decision-makers in the room.

The Specific Outcome

Every attendee leaves with at least one concrete opportunity they wouldn't have found otherwise.

- Job interviews, offers, and hires traced to event connections
- Funding applications submitted
- Collaborations and projects started

Tracked through **facilitator follow-up calls**, not just surveys. Evidence from EAGx Australia shows surveys alone don't capture real impact at 6 months.

BlueDot Impact

The System

Every event generates data that makes the next one better.

LAYER 1	LAYER 2	LAYER 3	LAYER 4	LAYER 5
Operations	**Data Collection**	**Participant Tracking**	**Outcome Tracking**	**Improvement Engine**
Swapcard + Luma	Forms + Surveys	Facilitator calls	Airtable (live)	Monthly retros

Layer 3 is the differentiator. Every participant gets an assigned facilitator who does monthly calls to convert connections into outcomes.

My Approach

- Diagnosed the problem first: where exactly is the talent pipeline breaking?
- Designed the solution to match that specific bottleneck, then iterated on it
- Built the system to measure whether it actually works

Full documentation in a **Google Doc** and a **GitHub repository** with all research, methodology, and presentation materials.
